DETAILED ACTION

Response to Arguments

1. Applicant's amendment filed on 03/29/04 has been received and entered in the case. In view of Applicant's amendments, the previous prior art rejections mailed on 12/03/03 have been withdrawn. However, Applicant's amendments necessitate new ground of rejection as set forth below.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4, 13, 14, 16, 21, 57, and 69 are rejected under 35 U.S.C. 102(b) as being anticipated by Podell et al. (US 4,908,531; previously cited).

With regard to claim 1, Podell et al. discloses in Fig. 2 an active electronic isolator (20) between an inherent source stage (the one connected to IN terminals) and an inherent load stage (the one connected to OUT terminals), including at least one circuit path (34) into which electrical noise is directed away from the source and the load stages, including configuring means (32) for configuring the path to appear as an infinite impedance to the output signal from the source stage (when 34 is off). Furthermore, the new added limitation "in which insertion loss of said electronic isolator is dependent upon the direction of signal and noise transmission

Art Unit: 2816

through said electronic isolator, wherein said insertion loss in one direction is greater than in the other direction” is also met by the reference (see column 1, lines 12-52).

With regard to claim 2, the configuring means comprises a voltage source (CONTROL voltage applied to 40).

With regard to claim 3, the isolator comprises a T-configuration (32) coupled to the voltage source.

With regard to claim 4, the voltage source is a controllable voltage source (see column 3, lines 30-36).

With regard to claim 69, the reference also meets the recited limitations in this claim.

Claim 13 is similarly rejected, note the above discussion with regard to claim 1.

With regard to claim 14, the insertion loss from the electrical input to the electrical output is less than the insertion loss from the electrical output to the electrical input (see column 1, lines 12-52).

With regard to claims 16 and 57, the reference also meets the recited limitations in these claims.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 2816

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
